(note) 1. This nearby source list is incomplete.

All the above sources are originally from the "src2.fits" file which is distributed with standard chandra processing.

Only sources with significant count rate and which are clear to visual inspection are included.

2. The size given above is the size of the region used in detecting that source.

3. For each source, background was subtracted from annular region around the source.

2 Fit Detail

- See spectrum page for used regions.

2.1 Central Patch:

- region: **Central Patch**.
- two thermal plasma model was used.

source=(xswabs * (xstraymond + xstraymond))
 reduced $\chi^2 = 24.8684$
 nh = 0.0626 $10^{22}/\text{cm}^2$

2.2 Outer Shell:

- region: **Outer Shell**.
- two thermal plasma model was used with abundance fixed at 0.3

source=(xswabs * (xstraymond + xstraymond))
 reduced $\chi^2 = 22.7556$
 nh = 0.0688 $10^{22}/\text{cm}^2$

2.3 Total:

- Above two model was merged for total spectrum.
- Spectrum of three region (Total, Central Patch, outer shell) were simultaneously fitted with same absorption model.
- flux values in the table are from this fit result.

- **Hughes et al.(1998)** gives 0.04 and 0.06
 source=(xswabs * ((xstraymond + xstraymond) + (xstraymond + xstraymond)))
 reduced $\chi^2 = 42.3797$
 nh = 0.0665 $10^{22}/\text{cm}^2$
